Hands-On How-To[®]
Security Training

No Theories. No Lectures. **Real-World Simulations.**

netSecurity
CISSP Training

Pass The First Time.

The Landscape

Digital information continues to grow at an exponential rate. With the growth of emerging portable data and storage devices, vital information can be anywhere and easily passed from device-to-device. Information stored in these changing media must be secured and can be crucial sources of evidence in corporate, civil, and criminal investigations. Moreover, information is increasingly becoming vulnerable to threats that result in unauthorized disclosure, illegal modification, and unavailability of data. Information technology professionals charged with assessing or implementing security measures must be adequately trained to do their job successfully.

Rest Assured. NetSecurity Corporation helps you reach your digital forensics, security, and training goals, promptly and cost-effectively.

Corporate Overview

Vision: To be **the brand of choice** for computer forensics and information security solutions

Mission: To serve you by providing digital forensics, hands-on security consulting, and Hands-on How-To® security training solutions that are high-quality, timely, and customer-focused

Core Values: NetSecurity is guided by the principles of **Customer Satisfaction, Excellence, Responsiveness, Innovation, Integrity, and Loyalty.**

Overview:

NetSecurity Corporation is a digital forensics, hands-on security consulting, and Hands-on How-To® security training company that provides solutions that are high-quality, timely, and customer-focused. We work with you to understand the unique challenges, goals, and requirements of your business:

- Through **NetSecurity Forensic Labs**, we deliver solutions that help you acquire, preserve, analyze, and produce digital evidence promptly
- Our **hands-on security solutions** protect you against emerging security threats and help you manage your enterprise security risk proactively
- Through our proprietary **Hands-On How-To®** training program, we provide knowledge of real-world security issues through simulation and "how-to" exercises that enable you do your job successfully, saving you retraining costs and time.

Based in Dulles, Virginia, NetSecurity is privately owned and managed by a core team of diverse professionals with expertise acquired from working at premier organizations such as Sallie Mae, Verisign, Network Associates, Trusted Information Systems, and leading Federal integrators. Our distinguished management team and advisory board are made up of business leaders, attorneys, and seasoned IT professionals.

Corporate Expertise:

NetSecurity's engineers, researchers, analysts, and forensic experts have proven skills in auditing, privacy, risk management, security assessment, penetration testing, computer security, systems administration, database systems, email administration, wireless networks, and complex network design and operation. We leverage our deep knowledge in these areas ensuring that "no stone is left unturned" during each engagement.

Value Proposition

Customers and partners work with us for the following reasons:

- We are a **boutique, digital forensics, hands-on security consulting and training company** challenged to solve emerging forensics and security issues.
- We are **not a product company** and we are **vendor neutral**. Our independence in consulting ensures objectivity in recommending solutions that are in your best interest.
- We **cultivate long-term relationships** and deliver **unmatched customer service** with each of our clients, resulting in high customer loyalty.
- We provide **outstanding quality** in our service delivery, all **tailored to your unique environment**.
- We are **very nimble and responsive** to the needs of our customers, partners, and suppliers. This ensures that any outstanding issue is resolved promptly.
- We have a **brigade of renowned security engineers, consultants, analysts, researchers, and instructors** with in-depth, hands-on field experience. Our business model ensures that only qualified professionals are always **working side-by-side with you** to complete your project promptly and within budget.
- Our security and forensics professionals have **industry prestigious certifications** such as: **CISSP, ISSAP, ISSMP, CISM, CISA, CHFI, and CCSE**, ensuring that certified professionals are adhering to high ethical standards during an engagement.

Client Testimonials

Thank you very much for all the hard work, focus, expertise, and time you have put into testing the security of our web-based payroll application.... All that we have learned so far will become part of our standard development procedures. It has been a rewarding experience working with you. Maybe we'll have the opportunity again in the future since we are continually developing new online products and services to expand our portfolio of offerings.

- Lead Software Developer, a Major International Payroll Company -

Thank you for an outstanding job on the penetration testing! I am very impressed by your knowledge and professionalism. I look forward to working with you on future engagements.

- Blake Turrentine, Chief Architect, Saturn Partners -

NetSecurity's ability to devote an immense effort, with little to no advanced notice, and deliver a work product that really shines is something that we have come to rely on here at TDI. NetSecurity came through in a pinch on one of our recent engagements and we will always be glad to rely on them in the future.

- Paul Innella, President & CEO, TDI Security -

The security audit we received from NetSecurity was integral to the planning and design of our suite of web based service products. Today, Datatel provides the finest on-line registration, grading and advising tools available for colleges and universities. This is sensitive data and protected by law. NetSecurity helped us make our web products both secure and compliant with FERPA requirements.

- Ed Mills, Director of Services, Datatel, Inc. -

Excellent job on the security audit performed by NetSecurity. It provided an in-depth view of our network that offers search and registration services. NetSecurity was able to demonstrate their knowledge on latest network security issues. The audit also provided Whonome a secure framework in designing our system and network.

- Thuan Nguyen, V.P. of Operations, Whonome, Limited -

Inno provided simple, straightforward discussions of the CISSP topics. He was willing and able to explain any subject in sufficient depth to make it understood and to provide real-life examples from his significant experience. He encouraged me to use him as a resource outside of the classroom and met with me beyond class time to provide additional support. Inno went above and beyond the call to provide answers, regardless of whether or not the questions directly addressed CISSP topics. I would highly recommend any course taught by Inno. Thanks for all the help Inno; I wouldn't have passed without it.

- CISSP Candidate, Global Computer Training Center -

NetSecurity Forensic Labs

NetSecurity Forensic Labs is a state-of-the-art, secure forensics facility equipped with leading-edge tools and technologies, staffed with industry experts, and employing processes which work together to yield timely, accurate, results that withstand the scrutiny of litigation. NetSecurity Forensic Labs provides cost-effective solutions in **electronic discovery (e-discovery)**, **incident response**, **digital forensics**, **training**, and **R&D**.

NetSecurity's Benefits

- We have a breadth of experience in computer security, privacy, and auditing of a variety of information technology environments.
- Our forensic experts have worked on highly classified projects in DoD and other U.S. Federal agencies.
- We ensure and preserve the confidentiality of your case, investigation, and engagement.
- Our rapid response capability ensures you get the right information, timely, efficiently, and cost-effectively.
- We deliver unmatched customer service and quality results.
- NetSecurity Forensic Labs is equipped with state-of-the-art tools and technologies to excavate data from the latest storage devices and produce admissible results.
- We teach the latest forensics tools and techniques of the trade, using real-world scenarios.
- Our professionals have years of experience and have certifications in: CISSP, ISSAP, ISSMP, CISM, CISA, CHFI, CCSA, CCSE, etc.
- We avoid conflict of interest and are vendor neutral in the choice of our forensics, e-discovery, or security tools.

- Cyber Extortion
- Evidence Tampering
- Digital Crime
- Computer Misuse
- Money Laundering
- Insider Trading

Hands-On Security Consulting

Value Proposition:

- We implement a life-cycle approach to security, incorporating methodologies that ensure your security posture is continuously and measurably improved
- We are a boutique security company
- We are vendor neutral
- We help you stay proactive in overcoming your security challenges
- We deliver unmatched customer service
- We provide outstanding quality results
- We are very nimble and responsive to your needs
- We have a brigade of security engineers, consultants, researchers, and instructors
- Our security professionals have industry prestigious certifications
- We help *You Focus On Your Business* while *We Focus On Your Security*

Solutions Overview:

NetSecurity has successfully delivered security services and solutions to both private and public sectors. Our hands-on consultants are security experts with significant years of experience in protecting customers' critical business assets. Our consultants have assisted organizations in protecting servers that are among the most visited and most hacker-targeted systems on the Internet.

NetSecurity realizes that prudent business practices require that information security technology processes and initiatives align and support business processes and objectives. To this end, our tailored consulting service portfolio focuses on information risk management, which employs cost-effective, rock-solid protection, and ensures that your security capabilities are still supporting your business objectives and directions. Solutions include:

- **Compliance Solutions:**
 - GLBA, HIPAA, PCI, SOX, SEC, FFEIC, OMB, FISMA, SB 1386, ISO 17799
- **Security Assessments & Audits:**
 - Vulnerability Assessment
 - Penetration Testing
- **Proactive Security Solutions:**
 - Risk Assessment
 - Security Policy Development
 - Security Awareness Training
 - Technology Implementation & Integration
 - Infrastructure Security
- **HSPD-12 Solutions**
 - HSPD-12 Implementation
 - PIV Certification and Accreditation (C&A)
- **Information Assurance**

Hands-On How-To® Security Training

NetSecurity's Training Mission:

To serve you by providing real-world simulation and step-by-step "how-to" security training, enabling you to perform your job efficiently and successfully.

Hands-On How-To® Courses:

NetSecurity's Hands-On How-To courses are tailored to IT professionals and auditors who need to know the step-by-step and how-to process for securing and auditing or assessing various IT environments. Each course provides students the opportunity to "learn-by-doing." Topics are laden with Hands-On How-To Lab Exercises (HOHTLEs) of real-world security issues. Courses include:

Beginner

- Introduction to Computers & Networking for IT Auditors
- Introduction to Network Security

Operating Systems

- Secure & Audit Unix Systems
- Secure & Audit Windows 2003 Servers
- Secure & Audit Windows Active Directory

Network

- Secure & Audit Network Systems, Devices, and Services
- Secure & Audit WiFi Networks
- Secure & Audit Voice Over IP (VoIP) Networks

Applications

- Secure & Audit Database Servers
- Secure & Audit Web-based Applications

General

- Perform Computer Forensics
- Develop Security Policies
- Perform Certification & Accreditation (C&A)

Training Policy:

- No Theories...
- No Boot Camps...
- No Cramming...
- No Crash Courses...
- No Certifications...
- No Degrees...
- No Information Dumps...
- No (Web-based) Lectures...
- Real-World Hands-On Simulation

Training Benefits:

- Detailed, step-by-step and how-to instructions
- Hands-On How-To Lab Exercises ("HOHTLE")
- Real-world simulation of IT systems as targets
- Expert instructors with real-world hands-on experience
- Customized private sessions
- Arsenal of take-aways, tools, guides, resources
- Up-to-date material
- Small class sizes of 9-13 students
- Vendor neutrality
- FREE post-training support

Lifecycle Training Approach:

- Understand Students' Expectations
- Deliver Course
- Conduct Students' Survey
- Perform On-going Research
- Perform Content Update

Security Certification Training (CISSP/Security+)

Pass The First Time.

Benefits of NetSecurity's Certification Training:

- Instructors' combined security certification exam PASS rate on previous training is 100% (Note: We do not guarantee that a student will pass)
- Two (2) instructors instead of one (1) to deliver CISSP Common Body of Knowledge (CBK) content, depending on the number of students
- Six (6) instead of five (5) days of CISSP training, ensuring completeness and thoroughness
- Three (3) instead of two (2) days of Security+ training
- Live classroom instruction with interaction with instructor(s) and other students
- Training includes hands-on exercises to demonstrate complex theoretical topics and to further improve content retention
- Seasoned expert instructors with real-world hands-on experience who are current on emerging security trends, threats, and topics
- Accelerated delivery system enhances knowledge retention through rigorous test-taking sessions that are representative of an actual security certification examination
- Students obtain a personal critique of individual practice exercises to help identify areas of weakness, ensuring that emphasis is placed on problem areas
- Up-to-date certification course content that covers (ISC)2's study guide and CompTIA's exam domain
- Available instructors to provide a 30-day FREE support and guidance on taking a security certification exam

Why Obtain Security Certification?

- Gain credibility and remain marketable
- Acquire new security skills
- Meet DoD Directive 8570.1
- Advance in your current position

NetSecurity's instructors maintain student PASS rate of 100% in both CISSP and Security+ certification exams. With our record, your chance of passing any of the above exams is assured or you take the next training for half the price!

"The instructor provided simple, straightforward discussions of the CISSP topics. He was willing and able to explain any subject in sufficient depth to make it understood and to provide real-life examples from his significant experience. I would highly recommend any course taught by the instructor. Thanks for all the help... I wouldn't have passed without it."

-- Managing Partner, Security Consulting Firm

"The training session was very informative and provided excellent insight in today's challenging world of security auditing tools and techniques. I look forward to attending more of NetSecurity's Hands-On How-To training courses."

-- Principal Consultant, Major Federal Integrator

Contract Vehicles

Sole Source:

Our customized solutions are timely, with high quality, and unparalleled customer service. Working side-by-side with us, agencies can sole-source engagements to our firm and rest-assured that their projects will be executed on time and within budget.

Navy Seaport-Enhanced (Seaport-e):

NetSecurity is a member firm of the ProLogic Team, which has an Indefinite Delivery, Indefinite Quantity (IDIQ), Navy SeaPort Enhanced (SeaPort-e) Multiple Award Contract (MAC) number, **N00178-07-D-5205**. SeaPort-e is a \$5.3 billion multiple-award umbrella contract that allows the US Navy to use an integrated approach to contracting for support services. The contract has a 3-year base period, with one 5-year award term and one additional 2-year award term for a possible total of 10 years.

VETS GWAC:

NetSecurity is a member firm of the VetsAmerica Team, which has a \$5 billion GSA Veterans Technology Services (VETS) Government-wide Acquisition Contract (GWAC), number **GS-06F-0533Z**. The VETS GWAC assists agencies in meeting their three percent (3%) service-disabled veteran-owned small business goals, by providing pre-qualified industry partners in one easy-to-use contract vehicle.
